## NOTES

There are multiple ways to level your floor frame. Our recommended leveling method is shown below.  
Leveling materials are not included in this kit.

## PREFERRED METHOD - 4 X 4 TREATED RUNNERS

- 3" (7,6 cm) Screws angled into 4 x 4.
- (2) at each point frame and 4 x 4 touch.

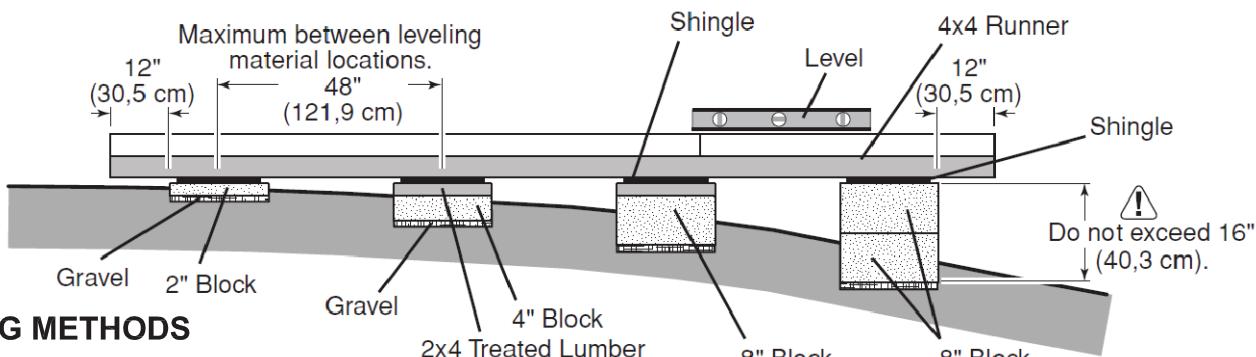

### MATERIAL REQUIRED

- x2 4" x 4" x 10' (10,2 x 10,2 x 304,8 cm)  
Treated Lumber
- Fasteners for Frame to 4" x 4".  
(3"(7,6 cm) Screws shown as one option.) Minimum (40) 3" (7,6 cm) screws / exterior grade.

**!** Use only wood treated for ground contact and fasteners approved for use with treated wood.

**!** Always support frame seams.

### LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" (30,5 cm) from ends of runners and no more than 48" (121,9 cm) apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

### MATERIAL REQUIRED

- Gravel
- Solid Masonry Blocks in 1", 2", 4" or 8" thickness
- 2x4 Treated Lumber
- Asphalt Shingles

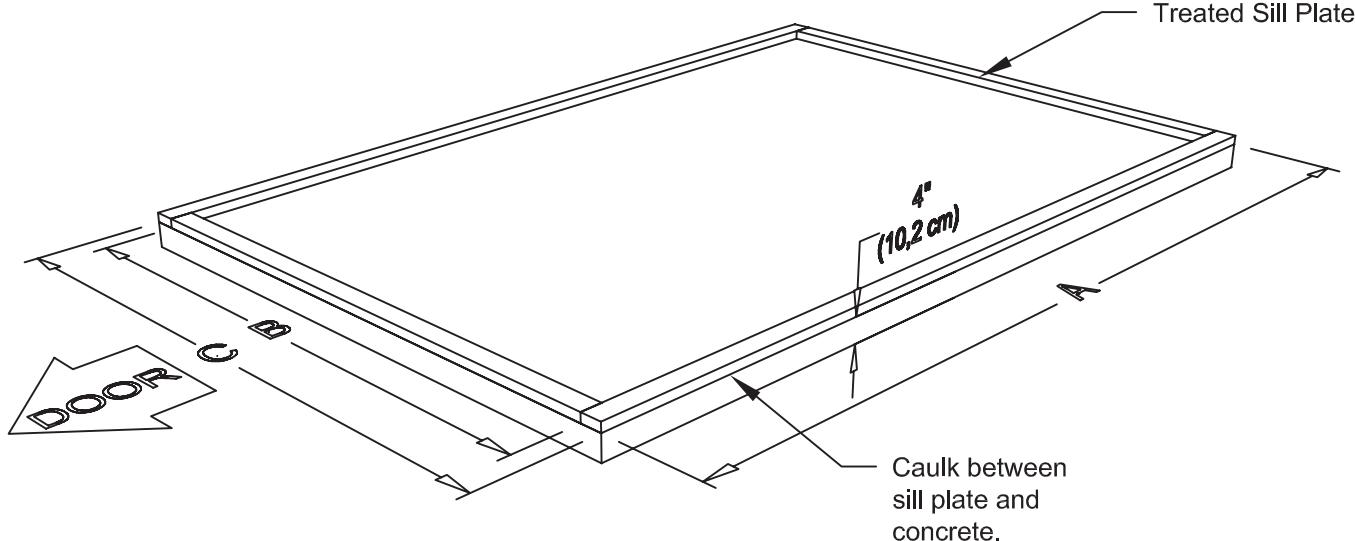

**!** Leveling higher than 16" (40,3 cm) is not recommended.

### CONCRETE

**MUST be treated lumber.**

Allow new concrete slabs to cure for at least (7) days.

- A treated 2 x 4" (5,1 x 10,2 cm) sill plate is required when installing your shed on concrete.
- Use a high quality exterior grade caulk beneath all sill plates.
- Fasten 2 x 4" (5,1 x 10,2 cm) sill plates to slab using approved concrete anchors (**fasteners not included**).

## FLOOR FRAME

### LEVEL AND SQUARE FLOOR FRAME

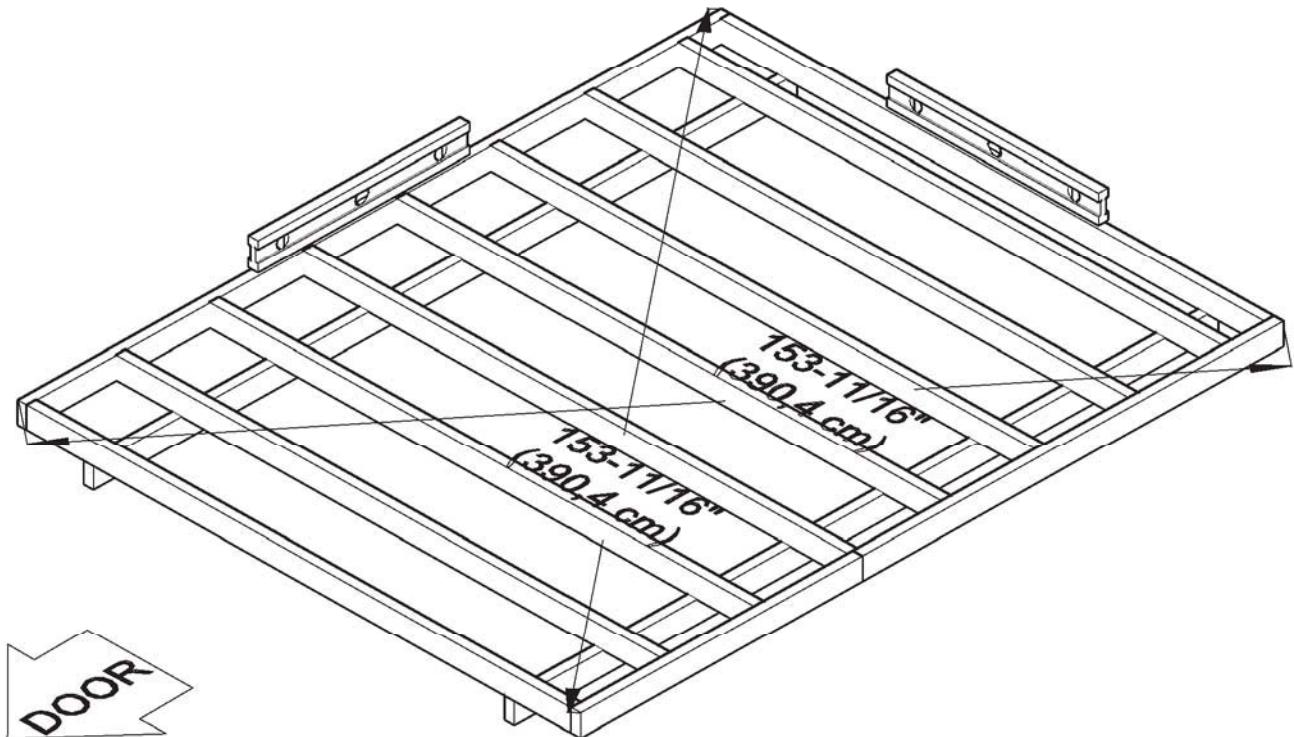

Before attaching floor decking, it is important to level and square the floor frame. A level and square floor frame is required to correctly construct your shed.

#### Begin

- ⚠ 1) See page 7 for the preferred floor leveling method.  
2) Use level and check the frame is level before applying floor panels  
3) Check for frame squareness by measuring diagonally across the corners. If the measurements are the same, the frame is square. The diagonal measurement will be approximately 153-11/16" (390,4 cm).  
4) When the frame is level at ends of each runner. Move to the opposite end of the frame. Secure the frame to 4x4 runners with one fastener at ends of each runner making sure the frame remains square (**Fig. A**).  
5) Once the floor is level and square fasten the frame at each point the frame contacts the 4x4 runners.

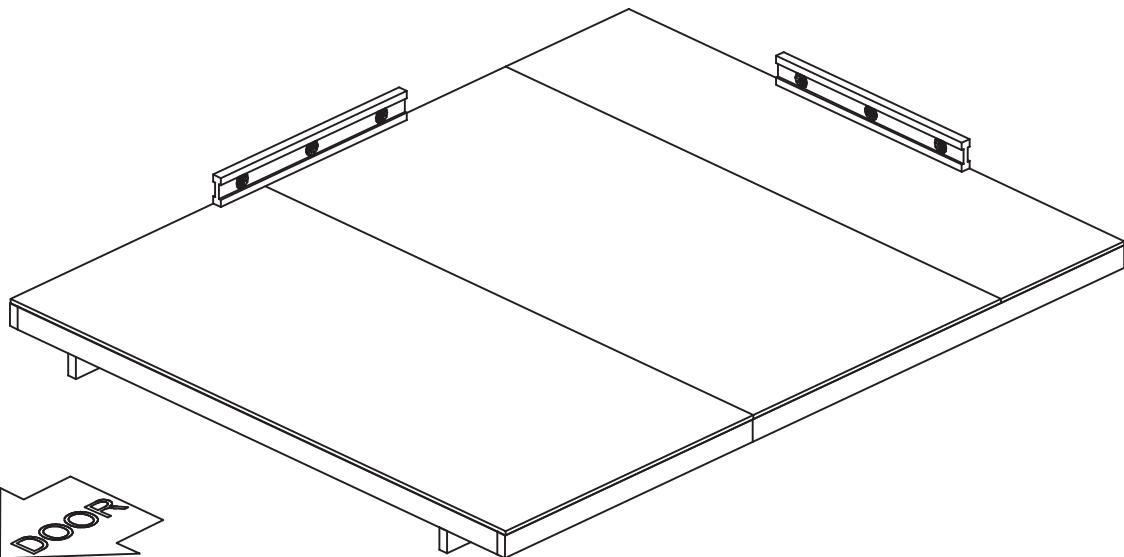

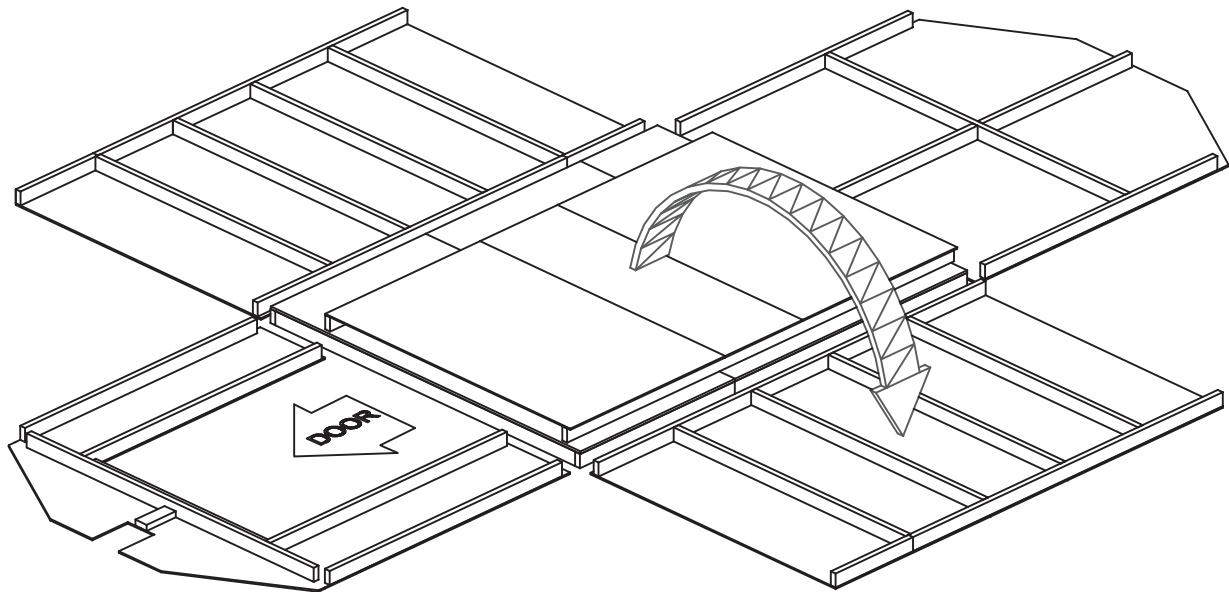

## IMPORTANT!

Check the floor frame is level after installing floor panels. Re-level if needed.

- The floor should be used as a stable work surface for wall construction.
- Organize your assembly procedure during the build process to avoid over-handling of the walls
